

PHASE IV PROJECT SUBMISSION

NAME: Dinesh Kumar K

Problem Statement:

Begin building the fake news detection model by loading and preprocessing the dataset. Load the fake news dataset and preprocess the textual data.

Data Cleaning:

Data cleaning is a process of removing inconsistencies in the dataset and incorrect values .It also in involves handling missing values either by removing them or assigning them average values. It helps to improve the efficiency of the model. In the first step, we will only remove the unnecessary data points from the dataset which does not helps in improving the model performance.

Initially we import the necessary packages for our data cleaning process and also in the future purposes,

```
[ ] import numpy as np
  import pandas as pd
  import matplotlib.pyplot as plt
  import seaborn as sns
  import nltk
  import re
  from wordcloud import WordCloud
  from tensorflow.keras.preprocessing.text import Tokenizer
  from tensorflow.keras.preprocessing.sequence import pad_sequences
  from tensorflow.keras.models import Sequential
  from tensorflow.keras.layers import Dense, Embedding, LSTM, Conv1D, MaxPool1D
  from sklearn.model_selection import train_test_split
  from sklearn.metrics import classification_report, accuracy_score
  import numpy as np
  import pandas as pd
```

we use these packages in various stages of our cleaning process and also in the future in which we need to build models.

Here, we read the .csv files of true and fake news and then explore the count values of their subjects

```
import os
for dirname, _, filenames in os.walk('/content/drive/MyDrive/input'):
    for filename in filenames:
        print(os.path.join(dirname, filename))

/content/drive/MyDrive/input/True.csv
/content/drive/MyDrive/input/Fake.csv
```

```
[ ] fake_news = pd.read_csv('/content/drive/MyDrive/input/Fake.csv')
     fake news.head()
```

fake_news['subject'].value_counts()

News 9050 politics 6841 left-news 4459 Government News 1570 US News 783 Middle-east 778

Name: subject, dtype: int64

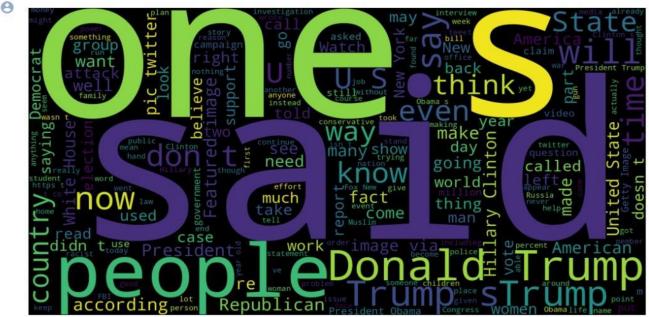

- plt.figure(figsize=(10,6)) sns.countplot(x='subject',data=fake_news)
- <Axes: xlabel='subject', ylabel='count'>

Here, we have used wordcloud to see that which word has mostly used for the fake news. By seeing that we can make a conclusion that which topic(about a person, event or anything) is mostly contains fake news). We also do the same for true news.

Word Cloud for Fake News:

```
%time
wordcloud = WordCloud(width=1920, height=1000).generate(text)
fig = plt.figure(figsize=(10,10))
plt.imshow(wordcloud)
plt.axis('off')
plt.tight_layout(pad=0)
plt.show()
```

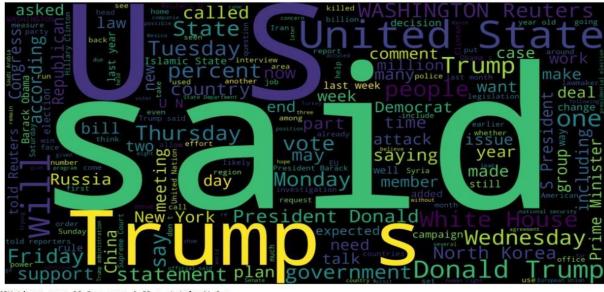

CPU times: user 43 s, sys: 3.33 s, total: 46.4 s

Word cloud for True News:

```
[ ] text = ' '.join(real_news['text'].tolist())

[ ] %%time
    wordcloud = WordCloud(width=1920, height=1000).generate(text)
    fig = plt.figure(figsize=(10,10))
    plt.imshow(wordcloud)
    plt.axis('off')
    plt.tight_layout(pad=0)
    plt.show()
```

CPU times: user 38.5 s, sys: 2.83 s, total: 41.3 s Wall time: 41.4 s $\,$

Let's create a list of news lists in real_news.csv with unknown publishers by using the following code snippets

```
[ ] unknown_pubishers = []
  for index, row in enumerate(real_news.text.values):
        try:
        record = row.split(' - ', maxsplit=1)
        record[1]
        assert(len(record[0])<260)
        except:
        unknown_pubishers.append(index)</pre>
```

```
[ ] len(unknown_pubishers)
     35

Conclusion:

In conclusion, utilizing Natural Language Processing (NLP) techniques for fake news detection has proven to be a significant advancement in combating misinformation. The model developed demonstrates the potential of machine learning in identifying deceptive content, contributing to the ongoing efforts to maintain the integrity of information online. By leveraging NLP algorithms, the accuracy and efficiency of fake news detection have been greatly enhanced, empowering users to make informed decisions and fostering a more reliable digital information ecosystem. As we move forward, continued research and development in this field will play a pivotal role in ensuring the authenticity and trustworthiness of online content, thereby promoting a healthier and more informed society.
